

# GLADIATOR<sup>®</sup>

by Whirlpool Corporation

## TIMBER OR TIMBER STUDS

- ✔ Identify structural studs.
- ✔ Measure the space between the studs and determine the length and quantity required of your GearWall<sup>®</sup> Panels or GearTrack<sup>®</sup> Channels.
- ✔ Measure and cut GearTrack<sup>®</sup> and or GearWall<sup>®</sup> Panels.
- ✔ Pre-drilling is recommended before mounting your Gladiator<sup>®</sup> wall system.
- ✔ GearWall<sup>®</sup> - When installing the GearWall<sup>®</sup> Panels start from the bottom and work up.
- ✔ Ensure your Gladiator<sup>®</sup> wall system is level before affixing your second screw and periodically check that your GearTrack<sup>®</sup> and or GearWall<sup>®</sup> Panels are level.
- ✔ Check to make sure you utilise all screw locations on every structural stud where you are installing your Gladiator<sup>®</sup> Wall System.
- ✔ **Tools Required**
  - Stud finder
  - Marking pencil
  - Measuring tape
  - Level
  - Cordless drill with a Phillips Head or a Phillips Head screw driver
  - Drill bit 2.5mm for pre-drilling if required
  - Hand saw or circular saw
